

Welcome to The Florida Department of Health in Seminole County

Quality healthcare, education, community partnerships and surveillance serve as the foundation of The Florida Department of Health in Seminole County's variety of services. With a focus on quality, using customer feedback and data-driven decision making, we accomplish our mission to protect, promote and improve the health of all people in Florida through integrated state, county and community efforts.

How to Report a Disease or Outbreak

Hours of Operation Monday - Friday 8:00 am - 5:00 pm

To report a disease or outbreak during office hours, visit our website or contact the Epidemiology Department at (407) 665-3294.

Health care Providers: to report an urgent disease or outbreak **after hours**, please contact (407) 665-3266 and follow the instructions to reach a 24/7 on-call Epidemiologist.

The Department of Health is responsible for the investigation and control of food-borne illness outbreaks associated with all food establishments. If you suspect a food is contaminated or has made you or someone that you know sick, contact the Epidemiology Program at (407) 665-3294 or visit www.reportfoodpoisoningflorida.com

For the list of reportable diseases/conditions in Florida visit www.floridahealth.gov

Location

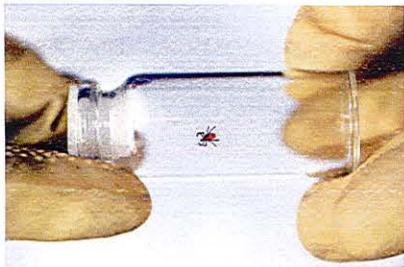

Sanford | Phone: (407) 665-3294
Fax: (407) 665-3214

400 West Airport Boulevard, Sanford, FL 32773

What is Epidemiology?

Epidemiology is a core public health function. Physicians and other healthcare professionals are required by Florida Statute to report any disease of public health significance to the Florida Department of Health. Typically this is done through a county health department's epidemiology program.

The Florida Department of Health in Seminole County Epidemiology Department monitors diseases other than tuberculosis, sexually transmitted diseases, and HIV/AIDS. Program staff members investigate disease outbreaks in order to identify the source, intervene to protect others who may be at risk, and identify ways to prevent additional cases.

Epidemiology staff also provide disease control education and consultation for the public, physicians, veterinarians, hospitals, schools, daycares, nursing homes, animal services, and other institutions in the community.

MISSION: The Florida Department of Health in Seminole County works to protect, promote & improve the health of all people in Florida through integrated state, county, & community efforts.

What We Do

- Conduct data analyses and disseminate information from surveillance systems
- Conduct active and passive surveillance to detect diseases and adverse health conditions
- Investigate reports of acute diseases and outbreaks
- Recommend appropriate prevention measures, treatment, and control
- Monitor and investigate reports of unusual health conditions
- Provide guidance for healthcare professionals, facilities, and other organizations regarding disease prevention and control
- Respond to disease-related inquiries from residents, healthcare providers, and others
- Rabies prevention, surveillance and control
- Provide rabies pre and post exposure vaccines
- Hepatitis Prevention Program
- Hepatitis vaccination, testing, and counseling

Rabies Prevention Program

Rabies is a deadly virus which infects the brain. It is transmitted through the bite and saliva of an infected animal. Prompt treatment with the rabies vaccine series will prevent the development of rabies in humans.

Animal bites to humans are reportable by Florida law. The Environmental Health and Epidemiology Departments receive reports of animal bites from Seminole County Animal Services, physicians and the public.

Persons reporting bites or other exposure to animals at risk for rabies should contact the Epidemiology Department at (407) 665-3294 during regular business hours, or (407) 665-3266 after hours.

Disease Surveillance & Statistics

Mosquito Borne Diseases

St. Louis Encephalitis Virus (SLEV), Eastern Equine Encephalitis Virus (EEEV), West Nile Virus (WNV), Malaria, Dengue, and Chikungunya.
